

3 WAYS

That ESIL Products purify your drinking water

As point of use systems for the home become an essential item, ESIL shows us why it's electrolytic technology is the leader in purifying drinking water

No Chemicals, No Membranes

ESIL does not use membrane nor chemical technology to filter water. These practices do not perform consistently and remove beneficial mineral content while concentrating toxic contaminants into a filter for landfill disposal.

ESIL destroys contaminants so that they will never again return to our water sources.

3 Point Purification

Bacteria, viruses, pathogens, heavy metals, chemicals (including fluoride and chlorine) and prescription drug products are destroyed, rendered inert and desynthesized.

Natural mineral content in your water is completely unaffected by the ESIL process

ESIL is Green

ESIL treatment products offer real time treatment, with no wasted water and low maintenance. **Gallon for gallon VS R.O. and distillation, ESIL is by far the least energy intensive and least expensive option**
